Fuel Polishing & Tank Cleaning

- **Fuel Polishing Services**

Fuel sampling and testing

Tank cleaning – Removal of water, sludge, phase separation, emulsified fuel

Fuel polishing stabilizes fuel in long term storage by processing fuel to remove water and suspended particulate matter.

Related services – System maintenance including filter changes, riser and tight fill repairs, in-tank equipment service, dispenser service

Fuel polishing of fuel in long term storage, such as for diesel emergency generators, removes water and suspended particulate matter.

- **Markets Served**

Emergency power installations

Diesel, gasoline and jet fuels storage

Card lock and retail service stations

Commercial fuel depots (mine, marine, airport, etc.)

- **Pricing**

All work is priced following site surveys or provision of site information from the customer.

- **Quality**

All work is performed using the highest quality processing media.

All work performed using 1-micron filter media.

Particulate removal to less than 10mg per Kg.

Water removal to less than 15 ppm.

Products and Service

- **General Services**

Tank cleaning, fuel polishing, and testing

Petroleum equipment repair and installation

Liquid handling and storage design and installation

Service Department is available 24/7

- **Products**

RDR Pumps and Dispensers
